PREFACE

Excellence in learning cannot be claimed without application of concepts in a dexterous way. In this regard one of the logical approach is to start in chunks; like chapter wise learning and applying the concept on exam based questions.

This booklet provides an opportunity to candidates to practice topic wise questions from previous years to the latest. Extensive working of Team MS Books has tried to take this booklet to perfection by collaborating with top of the line teachers.

We have added answer key / marks scheme at the end of each topic for the candidate to compare the his/her answer to the best.

MS Books strives to maintain actual spacing between consecutive questions and within options as per CAIE format which gives students a more realistic feel of attempting question.

Review, feedback and contribution in this booklet by various competent teachers of a subject belonging to renowned school chains make it most valuable resource and tool for both teachers and students.

With all belief in strength of this resource material I can confidently claim that it is worth in achieving brilliance.

Our sincere thanks and gratification to Mr. Waqar Ahmad who took out special time to help compile and manage this booklet. We would also like to appreciate chemistry faculty for reviewing and indorsing it.

CHEMISTRY PAPER 4

TABLE OF CONTENTS

Sr #	TOPICS	Pg #
5.1	Enthalpy and Born-Haber Cycles	7
5.2	Entropy and Gibbs Free Energy	48
6.1	Electrolysis	72
6.2	Electrochemistry	90
7.1	Ionic Equilibrium	135
7.2	Partition Coefficients K_{pc}	202
8	Reaction Kinetics	212
10	Group 2	268
12	Transition Elements	309
15	Arenes	446
16	Halogen Derivatives	502
17	Alcohols and Phenol	504
19	Carboxylic Acids and Derivatives	531
20	Nitrogen Compounds	570
21	Polymers	634
22.1	Chromatography	666
22.2	Mass Spectrometry	689
22.3	Carbon-13 NMR Spectroscopy	694
22.4	Proton (1H) NMR Spectroscopy	709
23	Drugs & Synthesis (Organic Synthesis)	743
	Interesting Questions	
	• Analytical Technique	757
	• Organic Chemistry	762

AS QUESTIONS IN PAPER 4		
1.	Atoms, Molecules & Stoichiometry	811
2.1	Particles in the Atoms	817
3.	Chemical Bonding	821
4.	States of Matter	833
5.	Chemical Energetics	837
6.	Electrochemistry	841
7.1	Chemical Equilibria	843
9.2	Periodicity of Chemical Properties	853
11.	Group 17	863
11.3	Reactions of the Halide Ions	866
11.4	Reactions of Chlorine	868
13.2	Sulfur	871
15.1	Alkane	874
15.2	Alkenes	880
16.	Halogen Derivatives	883
17	Alcohols	891
18.	Carbonyl Compounds	893
19.	Carboxylic Acids & Derivatives	902
20.	Nitrogen Compounds	904

Enthalpy and Born-Haber Cycles

Q2(d)/42/M/J/14

- 1 (d) (i) Write an equation to represent the lattice energy of PbCl_2 . Show state symbols.

.....

- (ii) Use the following data, together with appropriate data from the *Data Booklet*, to calculate a value for the lattice energy of PbCl_2 .

electron affinity of chlorine	=	-349 kJ mol^{-1}
enthalpy change of atomisation of lead	=	$+195 \text{ kJ mol}^{-1}$
enthalpy change of formation of $\text{PbCl}_2(\text{s})$	=	-359 kJ mol^{-1}

lattice energy = kJ mol^{-1}

- (iii) How might the lattice energy of PbCl_2 compare to that of PbBr_2 ? Explain your answer.

.....

.....

.....

[6]

MS
BOOKS

Q2(c)/43/M/J/14

- 2 (c) Copper(I) oxide and copper(II) oxide can both be used in the ceramic industry to give blue, green or red tints to glasses, glazes and enamels.

The table lists the ΔH_f^\ominus values for some compounds.

compound	$\Delta H_f^\ominus / \text{kJ mol}^{-1}$
$\text{Cu}_2\text{O(s)}$	-168.6
CuO(s)	-157.3
$\text{Cu(NO}_3)_2\text{(s)}$	-302.9
$\text{NO}_2\text{(g)}$	+33.2

- (i) Copper(II) oxide can be produced in a pure form by heating copper(II) nitrate. Use suitable ΔH_f^\ominus values from the table to calculate the ΔH^\ominus for this reaction.

$$\Delta H^\ominus = \dots\dots\dots \text{kJ mol}^{-1}$$

- (ii) Copper(I) oxide can be produced from copper(II) oxide.

- Use suitable ΔH_f^\ominus values from the table to calculate ΔH^\ominus for the reaction.

$$\Delta H^\ominus = \dots\dots\dots \text{kJ mol}^{-1}$$

- Hence suggest whether a low or a high temperature of oxidation would favour the production of copper(I) oxide. Explain your reasoning.

.....

.....

Q3(e)/42/O/N/14

- 3 (e) (i) What is meant by the term *lattice energy*?

.....

.....

- (ii) Explain why the lattice energy of calcium phosphate is **less** exothermic than that of magnesium phosphate.

.....

.....

[3]

Q1(b(ii))/43/O/N/14

- 4 (b) (ii) Use the following data, together with relevant data from the *Data Booklet*, to calculate a value for the lattice energy of strontium chloride. You may find it helpful to construct a Born-Haber cycle.

electron affinity per mole of chlorine atoms	-349 kJ mol^{-1}
standard enthalpy of atomisation of Sr(s)	$+164 \text{ kJ mol}^{-1}$
standard enthalpy of formation of $\text{SrCl}_2(\text{s})$	-830 kJ mol^{-1}

lattice energy = kJ mol^{-1}

[5]

Q1(d,e)/42/O/N/15

- 5 (d) (i) What is meant by the term *standard enthalpy change of hydration*, $\Delta H_{\text{hyd}}^\circ$?

.....

.....

..... [2]

Q2(d)/42/M/J/14

(ii) $\Delta H_f = \Delta H_{\text{at}} + E(\text{Cl}-\text{Cl}) + 1^{\text{st}} \text{IE} + 2^{\text{nd}} \text{IE} + 2 \times E_{\text{A}}(\text{Cl}) + \text{LE}$
 $-359 = 195 + 242 + 716 + 1450 - 2 \times 349 + \text{LE}$
 $\text{LE} = 2 \times 349 - 359 - 195 - 242 - 716 - 1450$
 $\text{LE} = -2264 \text{ (kJ mol}^{-1}\text{)}$ [3]

(iii) $\text{LE}(\text{PbCl}_2) > \text{LE}(\text{PbBr}_2)$ or more exothermic or stronger lattice [1]

because Cl^{-} / chloride anion has smaller radius / size than Br^{-} / bromide [1]

[6]

Q2(c)/43/M/J/14

2 (c) (i) $\Delta H^{\circ} = +2 \times 33.2 - 157.3 + 302.9 = (+) 212 \text{ kJ mol}^{-1}$ ecf [2]

(ii) $\Delta H^{\circ} = -168.6 + 2 \times 157.3 = (+) 146 \text{ kJ mol}^{-1}$ **allow** ecf from (c)(i) [1]
 high T / temperature since ΔH is positive / endothermic [1]

MS
BOOKS

Q3(e)/42/O/N/14 Q 3

(e) (i)	(enthalpy change) when 1 mole of an ionic compound is formed from its gaseous ions	1 1	
(ii)	Mg ²⁺ has a smaller (ionic) radii than Ca ²⁺ OR Mg ²⁺ is smaller than Ca ²⁺	1	[3]

Q1(b)(ii)/43/O/N/14 Q 4

(ii)	$\begin{aligned} \text{Lattice energy} &= \Delta H_f(\text{SrCl}_2) - (\Delta H_{\text{atom}}(\text{Sr}) + \Delta H_{f1}(\text{Sr}) + \Delta H_{f2}(\text{Sr}) + \Delta H_{\text{atom}}(\text{Cl}) + 2\Delta H_{\text{ea}}(\text{Cl})) \\ &= +(-830) - (+164 + 548 + 1060 + 242 + (2 \times -349)) \\ &= \mathbf{-2146 \text{ (kJ mol}^{-1}\text{)}} \end{aligned}$	1 1 1	[3]
------	---	-------------	-----

Q1(d,e)/42/O/N/15 Q 5

(d) (i)	(energy change when) 1 mole of ions gaseous (ions) dissolve in water (to form an infinitely dilute solution) or gaseous (ions) form an aqueous solution		2
(ii)	$\begin{aligned} \Delta H_{\text{latt}}^\circ \text{Ca(NO}_3)_2 + \Delta H_{\text{sol}}^\circ \text{Ca(NO}_3)_2 &= \Delta H_{\text{hyd}}^\circ \text{Ca}^{2+} + 2\Delta H_{\text{hyd}}^\circ \text{NO}_3^- \\ \Delta H_{\text{latt}}^\circ - 19 &= -1650 + (2 \times -314) \\ &= \mathbf{-2259 \text{ kJ mol}^{-1}} \end{aligned}$		3
(e)	Ca ⁽²⁺⁾ is a smaller (ion) or Ca ⁽²⁺⁾ has a larger charge density Ca ⁽²⁺⁾ has a stronger attraction / bond to H ₂ O		2
